EDUCATION

National Polytechnical Institute of Mexico (IPN)
Superior School of Computer Science (ESCOM -IPN) — December 2024. **GPA 88/100**
Bachelor of Computer Systems Engineering

WORK EXPERIENCE

Ford Motor Company — Naucalpan de Juarez, Estado de Mexico, September 2023 – December 2024

IT operations Engineer Trainee

- Developed and launched an AI-powered asset tracking solution hosted on Google Cloud Platform, featuring a chatbot that leveraged RAG systems, Python, and integrated with internal APIs. This streamlined the tracking of over 12,000 assets (computers, articles, servers) across Mexico, significantly reducing operational effort by approximately 24 hours.
- Assisted in implementing IT services (Redesigning and implementing 250 network nodes.) for a new software automation laboratory, including coordinating between cross functional teams, documentation of the status, tracking the project progress.

Software Engineer — Naucalpan de Juarez, Estado de Mexico, December 2024 – July 2025

- Collaborated on the development of a **GCP-native vulnerability dashboard** using Qlik Sense, establishing robust ETL data pipelines from GCP metadata and Artifact Registry to provide critical insights into image vulnerabilities.
- Led the full-stack re-development of an enterprise issue tracking application on **Google Cloud Platform**, utilizing **Python (FastAPI), React, and PostgreSQL**. Engineered robust CI/CD pipelines with **Tekton and Cloud Build**, integrating with **Microsoft Azure Graph API and Entra ID** to support 5 manufacturing sites across Mexico.
- Contributed to **DevOps practices and frontend development (Streamlit)** for an internal tool, enabling the visualization of web crawler data to identify issues with data leaking in Ford.com domain, enhancing content quality.

MLOPs Engineer — Naucalpan de Juarez, Estado de Mexico July 2025 – Currently

- Designin and maintaind data ETL pipelines on GCP, heavily involved in building end-to-end solutions forwarranty reserve calculations – from backenddata processing in python and SQL to deploying ML models with vertexAI or clusters in dataproc using pyspark framework, finally exposing insights through Power BI dashboards used by engineering team across north America and Europe

- Built and deployed **Vertex AI inference pipelines** using **Kubeflow Pipelines** for forecasting models using random Forest and NHPP to predict future repairs rates and costs per unit. Building backend logic and understanding ML basics to implement and ensure the model performance.

PROJECTS

BEIFI (Institutional Stimulus Scholarship for Researcher Training Investigation) Project of Discovering behavior patterns in Mexican with COVID- 19 using association rule mining. — August 2022- December 2022

SKILLS

PROGRAMMING LANGUAGES
1 year: HCL
2 years: C/C++, Java, Javastript
4 years: Python
6 months: PHP, Matlab/Octave

TECHNOLOGIES

+5 years: Microsoft Office package (Excel, Word, Powerpoint), Power Plattform (PowerApps, Power Automate)

+4 year: HTML, CSS. Tailwind, PostgreSQL, Git, Github, VirtualBox, Unix/Bash, Django package managers (Gradle, UV, poetry, yarn), venv. YAML, Toml files.
+3 year: SQL, React, Agile Methodology (Rally), Alteryx, Qlik Sense, PowerBI, GCP (Cloudrun, CLI to deploy instances, VertexAI, BigQuery), Docker, Podman, Postman, Figma

FOREIGN LENGUAGES
English: B2.
Spanish: Native

ONLINE COURSES
Programming: Coding on Python by Angela Yu instructor (Udemy, 2020), Metaheuristics and heuristics algorithms (Udemy, 2014), Crash course on python by Google (Coursera, 2025), Terraform by coursera Project Network (coursera,2025)

RESIDENCE

Latacunga #656 col Lindavista Sur, CP 07300 CDMX.
